

# RED DAWN.

Hybrid Beetroot  
WJ105

An extremely uniform, high yielding variety with consistent quality and drought/disease tolerance

## Key Details

**Maturity from sowing:** 60 days

**Market segment:** Topped, bunched, processing and pigment extraction

**Bolt habit:** Late

**Yield Potential:** Very high

**Storage:** High juice retention during storage

## Disease Tolerance

Highly tolerant to cercospora leaf spot, moderately tolerant to downy and powdery mildew. Tolerant to rhizoctonia.

## Sowing Density

**Fresh / bunches:** 1.0 - 1.3 million seeds per hectare

**Juicing / processing:** 750 000 - 850 000 per hectare

## Foliage Characteristics

**Top height:** 25 cm

**Leaf habit:** Fully erect

**Leaf colour:** Bright green with some red

## Root Characteristics

**Shape:** Top shaped

**Size:** Smaller average root size

**Internal colour:** Dark red

**Sugar content:** High brix (12-15%)

**Internal zoning:** None

**Disclaimer:** Information is based on trial and field observations. Crop performance depends on many factors. We accept no liability or loss that may occur
