

GLADIATOR.

F1 Nantes Hybrid
WA126

The best choice for production when difficult growing conditions and climate are expected. High brix with an excellent sweet flavour.

Key Details

A superb F1 Nantes hybrid

- Very strong seedling vigour and good cold emergence.

Maturity: Early maturity, with excellent holdability, and a high splitting tolerance

- Summer 90 - 100 days
- Winter 110 - 130 days

Market segment:

- Fresh
- Bunching
- Processing

Bolting: Excellent bolting tolerance, with an extended harvest window.

Storage: Average to good

Disease Resistance

Intermediate resistance:

- Alternaria resistance
- Powdery mildew resistance
- Xanthomonas - highly tolerant
- Best yields with a preventative spray programme

Sowing Density

1.0 - 1.3 million seeds per hectare

Planting Schedule

Frost free areas:

J F M A M J J A S O N D

High frost areas:

J F M A M J J A S O N D

■ Southern hemisphere planting times

Foliage Characteristics

- Dark green
- Medium to long length
- Strong attachment, suitable for mechanical harvest

Root Characteristics

Length: 16 - 20 cm

Shape and colour: Long, cylindrical, slightly tapered, dark and attractive orange.

Uniformity and skin smoothness: Excellent, smooth skins.

Disclaimer: Information is based on trial and field observations. Crop performance depends on many factors. We accept no liability or loss that may occur.
